

NW 12 Minutes at NW Meeting at ECER 2021

The main topic of the network meeting at ECER 2021 was the re-labeling of the network from Library and Information Science to Open Science. Thereby, Open Science is seen as a much more open topic and more relevant for researchers across educational fields. The network and the association could position themselves as progressive in comparison to the psychological research community and others.

A range of activities for the ECER 2022 in Yerevan were discussed:

- a panel discussion about Open Science in Education
- an unconference with slots offering intensive interaction and low threshold access (e.g. Hackathon, Bring your own data)
- several joint sessions (NW 09: Open data with assessment, NW 17: Histories of Education, NW 06: financing Open Access).

Additionally, a starting session about Open Science from Armenia has been brought up as an idea to get in contact with local researchers.
