

Network 24 Meeting Notes – ECER 2023

Network 24 has had a remarkable year of achievement and growth. Our participation in ECER 2023 in Scotland demonstrated the strength and diversity of mathematics education research. We received many submissions that reflected the high quality and relevance of our network's focus. We are also pleased to report a high acceptance rate, but our goal to increase participation beyond pre-pandemic levels remains a priority.

During the meeting, we warmly welcomed Tuğçe Karaca and Esra Demiray as co-convenors, which is a promising development for our community. We discussed several initiatives to increase the impact of Network 24, including the organization of a Season School and a panel discussion for the coming years, and considered special calls on critical issues in mathematics education research.

As we look to the future, our primary goal is to foster a more connected and dynamic research community that encourages greater collaboration across networks. We are grateful for the continued contributions of our members and look forward to another fruitful year of collaboration and discovery in our field.
